

Everon was succesful at the TSA conference in London, UK.

Everon participated at the TSA conference, held in London 15-17th November. Everon had the pleasure to actually sign orders for devices at the show as many UK councils have tested, purchased and found the Vega GPS watch the ultimate solution for their various needs of a system that allows for an enlarged world for many people with cognitive disorders like Alzheimer's, dementia, LD etc.

The Dutch company Verklizan presented its UMO platform for alarm receiving centers using a live Vega GPS watch. "We are very happy that Verklizan have concluded a full integration of Everon's Vega device, especially as they also have a great momentum on the UK market right now." said Markus Merne, CEO of Everon Group.
